Rivers Lost, Rivers Regained
Rethinking City-River Relations
Edited by Martin Knoll, Uwe Lübken, and Dieter Schott
2017 • 368 pp. • 978-0-8229-4459-1 • Cloth $45.95
SALE PRICE $32.17
This volume traces the complex history of how cities have appropriated, lost, and regained their rivers. The four parts discuss how cities have gained control and exerted power over rivers and waterways far upstream and downstream; how rivers and floodplains in citiescapes have been transformed by urbanization and industrialization; how urban rivers have been represented in cultural manifestations, such as novels and songs; and how more recent strategies work to redefine and recreate the place of the river within the urban setting.

A Negotiated Landscape
The Transformation of San Francisco’s Waterfront since 1950
Jasper Rubin
Second Edition
2016 • 416 pp. • 978-0-8229-6417-9 • Paper $29.95
SALE PRICE $20.97
To understand the Fog City’s landscape, Jasper Rubin not only explores the built environment but also the major forces that have been at work in its redevelopment. While factors such as new transportation technology and economic restructuring have been essential to the process and character of the waterfront’s transformation, the impact of local, grassroots efforts by planners, activists, and boosters have been equally critical. For this new edition Rubin provides a new concluding chapter that updates the progress of planning on San Francisco’s waterfront and examines debates over the newest visions for its development.

Epidemics, Empire, and Environments
Cholera in Madras and Quebec City, 1818–1910
Michael Zeheter
2015 • 336 pp. • 978-0-8229-4446-1 • Cloth $45.00
SALE PRICE $31.50
Cholera was a global scourge against human populations throughout the nineteenth century. Practitioners had little success in mitigating the symptoms of the disease, and its causes and eradication were bitterly disputed. What experts did agree on was that the environment played a crucial role in the sites where outbreaks occurred. Michael Zeheter offers a probing case study of the environmental changes made to fight cholera in two markedly different British colonies: Madras in India, and Quebec City in Canada.

Power on the Hudson
Storm King Mountain and the Emergence of Modern American Environmentalism
Robert D. Lifset
2014 • 328 pp. • 978-0-8229-6305-9 • Paper $25.95
SALE PRICE $18.17
“Lifset has provided readers a thorough account of the Storm King controversy, one of the defining episodes of modern environmental politics.”
—American Historical Review
“The Storm King project is an excellent choice through which to examine the rise and tactics of late twentieth-century environmentalism.”
—Journal of American History

Energy Capitals
Local Impact, Global Influence
Edited by Joseph A. Pratt, Martin V. Melosi, and Kathleen A. Brosnan
2013 • 288 pp. • 978-0-8229-6266-3 • Paper $27.95
SALE PRICE $19.97
As Energy Capitals demonstrates, the discovery and exploitation of fossil fuels has proven to be a mixed blessing in many of the cities and regions where it has occurred. With case studies from North America, Norway, Africa, and Australia, this volume views a range of older and more recent energy capitals, contrasts their evolutions, and explores why some capitals were able to influence global trends in energy production and distribution while others failed to control even their own destinies.

Toxic Airs
Body, Place, Planet in Historical Perspective
Edited by James Rodger Fleming and Ann Johnson
2014 • 304 pp. • 978-0-8229-6290-8 • Paper $28.95
SALE PRICE $20.27
“The authors have produced a marvelously wide-ranging book that opens up a series of questions for scholars of medico-environmental history. Not the least of these is what the relationship between the history of medicine and environmental history should be.” —Social History of Medicine
Toxic Airs analyzes airborne and atmospheric threats posed to humans, how conceptions of toxicity have evolved, and how humans have both created and mitigated toxins in the air.

New Natures
Joining Environmental History with Science and Technology Studies
Edited by Dolly Jørgensen, Finn Arne Jørgensen, and Sara B. Pritchard
2013 • 304 pp. • 978-0-8229-6342-7 • Paper $27.95
SALE PRICE $19.97
“Both individually and collectively, this is a fine and coherently organized set of essays. The authors’ usage of STS theory to illuminate their empirical cases are interesting in and of themselves, but also suggestive of ways that other environmental historians might profitably deepen and expand their own research through judicious adaptations of theory.”
—ICON: Journal of the International Committee for the History of Technology

Refrining Nature
Standard Oil and the Limits of Efficiency
Jonathan Wlasik
An analysis of the environmental and social consequences of the early petroleum industry with a focus on John D. Rockefeller and the Standard Oil Company during the Gilded Age.

River City and Valley Life
An Environmental History of the Sacramento Region
Edited by Christopher J. Castaneda and Lee M. A. Simpson
2013 • 416 pp. • 978-0-8229-6250-2 • Paper $27.95
SALE PRICE $19.97
Often referred to as “the Big Tomato,” Sacramento is a city whose makeup is significantly more complex than its agriculture-based sobriquet implies. The contributors reveal the major transformations to the natural and built environment that have shaped Sacramento and its suburbs, residents, politics, and economics. Together, they provide a compelling case study of urban and suburban development in California and the American West.
